

## Japanese Yew

*Podocarpus macrophyllus*

Height: 30 feet

Spread: 15 feet

Sunlight:

Hardiness Zone: 8a

Other Names: Kusamaki, Inumaki, Buddhist Pine

### Description:

This is a showy evergreen with an irregular columnar habit that can be massed as a screen; will tolerate low light situations; adds a wonderful texture to a border

### Ornamental Features

Japanese Yew has attractive dark green evergreen foliage which emerges light green in spring on a tree with a columnar habit of growth. The glossy narrow leaves are highly ornamental and remain dark green throughout the winter.

### Landscape Attributes

Japanese Yew is an evergreen tree with a narrowly upright and columnar growth habit. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance tree, and can be pruned at anytime. It has no significant negative characteristics.

Japanese Yew is recommended for the following landscape applications;

- Accent
- Mass Planting

### Planting & Growing

Japanese Yew will grow to be about 30 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This tree does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America.

**At Dutch Growers, we treat this plant as a "HOBBY PLANT". It is not officially recognized as winter-hardy in our zone 3, however, there is a strong likelihood that it will survive winter. Warranty expires on Nov. 1 season of purchase.**
