Mary Washington Asparagus is a perennial vegetable plant that is typically grown for its edible qualities. The stems are usually harvested from mid to late spring. The stems have a pleasant taste.

The stems are most often used in the following ways:

- Cooking

Planting & Growing

Mary Washington Asparagus will grow to be about 4 feet tall at maturity, with a spread of 30 inches. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 15 years.

This plant is typically grown in a designated vegetable garden. It does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid.
