

Blue Bouquet Passion Flower

Passiflora 'Blue Bouquet'

Height: 10 feet

Spread: 24 inches

Sunlight: 

Hardiness Zone: (annual)

Description:

Without a doubt one of the more spectacular vines for the garden; the large flowers are showy and distinctive, with their oddly-shaped stamens and pistils; wonderful for covering an arbor, trellis or lattice, the flowers are individually beautiful

Ornamental Features

Blue Bouquet Passion Flower features showy lightly-scented powder blue star-shaped flowers with deep purple eyes and purple anthers at the ends of the branches in mid summer. The flowers are excellent for cutting. Its compound leaves remain dark green in colour throughout the season.

Landscape Attributes

Blue Bouquet Passion Flower is a multi-stemmed annual with a ground-hugging habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It has no significant negative characteristics.

Blue Bouquet Passion Flower is recommended for the following landscape applications;

- Accent
- Hedges/Screening
- General Garden Use

Planting & Growing

Blue Bouquet Passion Flower will grow to be about 10 feet tall at maturity, with a spread of 24 inches. As a climbing vine, it should either be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type, but has a definite preference for alkaline soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
